

SVC-E

VERTICAL LIFTING CLAMP (Lock Handle Type with Universal Shackle)

Cam, pad **cross type, normal pitch**

Features

- For vertical lifting of steel plates and other steel structures, with more lifting directions possible and light-weight type.
- The spring-type tightening lock mechanism assures a positive initial clamp force.

UNIVERSAL SHACKLE TYPE

The universal shackle allows the cam to generate a clamping force on the load at any direction it is pulled.

TIGHTENING AND RELEASING LOCK MECHANISM

Tightening lock mechanism

When you pull upward the lock handle, the lock gets set and the clamp grips firmly the workpiece. This lock is very safe and even if the sling rope loosens, or if a shock occurs, the clamp will not come off.

Releasing lock mechanism

When you pull downward the lock handle, the lock gets released. Never attempt a lifting operation in this state. It would be dangerous as the tightening would be insufficient.

Example of use Always lift a load at 2 or more points for safety.

Steel plate vertical lifting

Steel beam lifting

Steel plate turning-over

Pipe lifting

When lifting a pipe, position the clamps so that they face each other as shown on the drawing. (the lifting angle of the sling rope must be kept within 60°.)

Cam, pad : cross type, normal pitch (P=3.0)

Item No.	Rated capacity (ton)	Clamp range (mm)	Size (mm)														N.W. (kg)
